

ALUFIX

Modular Clamping System

Main catalogue 2021 – Witte Barskamp GmbH & Co. KG

Witte Barskamp GmbH & Co. KG: Fixed on precision

Founded in 1969 as a production partner for high-precision components in the aerospace industry, Witte is today one of the leading international developers and manufacturers of modular fixturing, positioning and measuring devices as well as feeder systems. With the ALUFIX modular fixturing system and the versatile vacuum clamping systems, Witte is considered the global market leader.

Branches and representative offices in Singapore, Mexico, USA and Brazil as well as an extensive dealer network ensure the worldwide availability of Witte products and services.

Almost all major companies in the automotive and aerospace industries rely on products and application solutions from Witte. In addition, there is a wide range of applications in all industries in which dimensional quality monitoring, economic efficiency and precision play decisive roles.

In the last 50 years, Witte has acquired over 250 patents, utility models and word marks, 70 of which are still valid today. Many of them for ALUFIX - the quality reference for modular clamping system

Legend

Unless otherwise defined, all dimensions are given in millimeters and weights in grams.

ALUFIX elements are made of high-tensile aluminum EN AW 7075, "Eco" versions are made from EN AW 6083.

The surface is anodized, the standard color is "natural", versions in black are alternative.

Other colors on request.

ALUFIX preferred range marking

Green: Item is available immediately.

C: Classic version

E: Eco version

C-E: Classic or Eco

■: Color "natural"

■: FColor "black"

Example: Item is available immediately in the Classic, natural anodized version.

Example: Article is available immediately in the Eco, black anodized version.

Modular precision and systematic flexibility

ALUFIX from Witte is the worldwide proven clamping and fixturing system for reproducible workpiece fixtures in dimensional measurement and manufacturing technology.

Made from high-tensile aluminum (ALUFIX Classic: EN AW 7075, ALUFIX Eco: EN AW 6083), it guarantees the best material quality, durability and resilience.

Reproducible and retoolable

Fixtures implemented using ALUFIX can be reliably assembled. Consistent implementation of the modular system allows unlimited, long-term multiple use of practically all standard elements built into devices.

System sizes and designs

ALUFIX is available in four system sizes:

- for holding and optical measurement of small parts,
- for fixtures for small to medium size parts,
- for medium-sized to large fixtures for assemblies, meisterbocks etc.
- as well as for the support of large and heavy parts.

In addition to the ALUFIX Classic version made of high-tensile aluminum, Witte's ALUFIX Eco is a particularly economical variant of the system made of medium-tensile aluminum for normal use and moderate part change intervals.

All basic elements of the clamping and fixing system are also available anodized black.

They are specially designed for use with optical scanning systems.

All ALUFIX system elements follow a uniform concept, are unreservedly downward compatible and at the same time secure the basis for future expansion.

100% Compatibility

- overall system upwards and downwards compatible
- all system sizes can be combined with one another
- no weight and size limits
- existing systems and clamping aids can be integrated

100% Continuity

- ALUFIX has existed for more than 35 years
- the basic design idea has always been maintained
- future expansion will also follow this principle

100% Availability

- over 90 percent of the components are in stock
- dispatch within 24 hours
- Witte's own, flexible production with high depth of manufacturing
- worldwide service network

Features and benefits

- highest precision through fine machining of components on all sides
- made of high-strength aluminum EN AW 7075 (ALUFIX Classic)
- extremely light and highly resilient
- high stability with extremely low weight
- corrosion-resistant and maintenance-free
- wear-resistant thanks to anodized coating on all sides
- system sizes can be combined
- available in four system sizes
- low space requirement due to well-thought-out variety of components
- no weight and size limits of workpieces to be mounted
- completely reproducible
- long-term multiple use thanks to reusable components
- no special assembly tools required
- parts library for all CAD systems
- free user training at Witte

The ALUFIX principle: ingenious from the base up

Six sides, eight corners, twelve edges: the starting shape and basic element of the ALUFIX system geometry is the cube. All other element configurations are created by multiplying this basic shape - with through bores on all surfaces creating connection options on all sides. Each hole is suitable for both positioning and fixing.

The ALUFIX element geometry ensures that the grid is precisely maintained in all directions and across any number of joins.

Creation of the ALUFIX element geometry

- starting point

- through bore on all surfaces

- chamfers on all edges

- bevels on all corners

- sectional view

Connection technology

- sleeve for positioning

- crosspiece nut to screw in

- sleeve, nut and screw

- twin bolt for positioning

- lock to secure

- lock and twin bolt

The ALUFIX application and system diversity

ALUFIX elements are used for

- measuring fixtures
- holding fixtures
- checking gauges
- assembly and welding fixtures
- meisterbocks
- support structures for cubings and gauges

As well as

- in prototype building
- in model making
- in design development as support for clay models

Versions

ALUFIX Classic
Made of high-tensile aluminum for the highest demands on load, stability, durability and accuracy.

ALUFIX Eco
Made of medium-tensile aluminum as an inexpensive alternative for normal use and moderate part change intervals.

System sizes

- AF 16 for holding and optical measurement of small parts
- AF 25 for fixtures for small to medium size single parts
- AF 40 for medium-sized to large fixtures for assemblies, meisterbocks etc.
- AF 50 for the support of large and heavy parts

Element groups

- Basic elements
 - plates, structure plates, plate areas
 - bars, struts, angle brackets
- Adjustment elements
 - slides, rocker, jacks, rotary plates
- Contact elements
 - spheres, cones, prisms, contour blocks
- Clamping elements
 - hold-down springs, toggle clamps, clamps, keyless chucks, vises, magnets
- Connection elements
 - couplings, quick connectors, screw connectors

Alufix base plates

The proven base for multiple fixtures

The dimensions: precise variety

ALUFIX base plates are available in Witte system sizes 16, 25 and 40. Standard dimensions and base plates from the preferred range can be found on the following pages. Information on other dimensions is available on request.

Aluminum material: Strong and light

ALUFIX base plates are milled from high-tensile aluminum alloys.

Materials:

- EN AW 7075 for ALUFIX Classic base plates
- EN AW 6083 for ALUFIX grid base plates Eco

ALUFIX elements can be anodized in different colors.

The color "natural" is standard, "black" is available as an alternative - for Classic add "-1" to the article number, for Eco add "1" when ordering.

Other colors on request.

ALUFIX base plates are mainly used for small and medium sized fixtures. The plates are rigid, precise and offer the greatest freedom in assembly, as the entire surface can be used - in contrast to frame type fixtures construction made of profiles, which are suitable for larger structures. ALUFIX base plates are available in two versions:

ALUFIX Classic base plates

with mounting holes on all 6 sides.

ALUFIX grid base plates

with mounting holes only on the surface, in Eco design.

ALUFIX Classic base plate:

ALUFIX grid base plates Eco:

ALUFIX Classic Base plates

ALUFIX Precision Grid Base Plates

- Witte Alufix base plates provide a versatile and absolute precise base for repeatable measurements of clamped workpieces and fixtures.
- Individually configured to best fit your measurement volume, your measurement system or your fixture size.
- Designed to accommodate various and changing clamping configurations.
- Universally compatible to all Alufix modular system components as well as other non-Witte systems*

*considering a non-Witte system having the same or smaller thread size and precision bore diameter.

Universal design, individual solution

Witte precision grid base plates are designed to be used on CMM tables. With according size options, mounting through holes and designated eye bolt threads for safe lifting and handling. The plates provided are efficiently suitable for all common CMM tables and optical measurement systems as well as fixtures even as the standard pre-configured versions.

Individual user specific requests range in combination of different grid spacing, plate thickness, length and width, surface treatment and plate surface type.

Whether used as a large universal grid base plate or base of a small part holding fixture: Alufix grid base plates provide the needed precision and stability for your reliable and perfect measurement result. At all conditions, with the flexibility ensured. Proven over a thousand times...

Grid spacing

- var. Per customer request
- 200

- One-piece
- Multi-piece

Handling

- Hoist rings / eye bolts
From 600 x800 mm
- Handle
Up to 600 x800 mm
- Fork lift pockets

Perfect pre-configured::

- Dimensions from 200x400 mm to 2.5x10 m
- Plate thickness options 20 / 25 / 30 mm
- Grid spacing 50 / 100 mm
- High precision bores with thread
- Plate mounting through holes
- Surface treatment black or clear anodizing
- Boltable handles or eye bolts (from plate size 600 x 800 mm)
- Plant quality certificate
- Delivery time approx. 6 weeks

Available special options:

- Feet, with or without frame
- Individual grid spacing and bushings
- Special surface treatment – hard anodized (extra thick coating)
- traceable test report

Uniquely versatile: size variable high- precision bores

The innovative solution of having size variable high-precision bores makes the Witte grid base plates the **most flexible and versatile bases of their kind.**

The precision bores in the top surface of the plate offer a unique optional benefit: **boltable inner-diameter and thread reducing bushings.**

This enables the option to have a large and changing variety and also user-specific, but most importantly precisely repeatable, clamping configuration.

Irrelevant of the hole diameter and clamping system used.

ALUFIX Bars

Link between base and contact point

ALUFIX Bar Classic :

ALUFIX Bar Light Classic:

ALUFIX Bar Light Eco:

The dimensions: precise variety

ALUFIX Classic bars are available in Witte system sizes 16, 25 and 40.

Standard dimensions and bars from the preferred range can be found on the following pages, we will gladly provide information on other dimensions on request.

ALUFIX Light bars are available in Witte system sizes 25, 40 and 50.

Standard dimensions and bars from the preferred range can be found on the following pages, we will gladly provide information on other dimensions on request.

There are two kinds of ALUFIX bars:

ALUFIX Bar Classic

Alufix full bars are suitable for building small to medium size fixtures as a link between base and workpiece contact point. They can be connected on all 6 sides using quick or screw connection technology and are extremely flexible for all kinds of applications. The sizes listed are standard, other dimensions on request.

ALUFIX Bar Light Classic

For larger structures and as a basis for frame type fixtures. The use of a specially developed extruded profile in combination with milling processes ensures stability, accuracy and low weight.

The ALUFIX Light Bars are also available in the Eco version.

Aluminum material: Strong and light

ALUFIX bars are milled from high-tensile aluminum alloys.

Materials:

- EN AW 7075 for ALUFIX Bars Classic
- EN AW 7075 for ALUFIX Bars Light Classic
- EN AW 6083 ALUFIX Bars Light Eco

ALUFIX elements can be anodized in different colors. The color "natural" is standard, "black" is available as an alternative - for Classic add "-1" to the article number, for Eco add "1" when ordering. Other colors on request.

ALUFIX

Quick Change Couplings

For easy exchange of contact points

Quick change couplings comprise of a top and bottom section, which are aligned accurately together via ball seats. Locking is done with a quick lock via a lever.

The total height is exactly in Alufix grid.

Hinges connect top and bottom sections if required and provide a foldback function. The modular design enables combination possibilities as shown on the right.

Aluminum material: Strong and light

ALUFIX Quick change couplings are milled from high-tensile aluminum alloy.

Material:

- EN AW 7075

ALUFIX elements can be anodized in different colors.

The color "natural" is standard, "black" is available as an alternative - for Classic add "-1" to the article number, for Eco add "1" when ordering.

Other colors on request.

Quick change coupling for folding back, hinge is mounted at the rear.

Quick change coupling to fold sideways to the left, hinge is mounted on the left.

Quick change coupling to fold sideways to the right, hinge is mounted on the right.

Quick change coupling with two folding options. One hinge on the left and one at the rear.

Quick change coupling with three folding options. One hinge on the left, one on the right and one at the rear.

Quick change coupling, Top and bottom sections separately, standard version.

ALUFIX

Adjustment elements

Accurate offset positioning in every axis where required

Application example:

The angle of the center point is guaranteed by a specially machined contour block. The position in x, y and z is defined by the shimblock, the upper part of which is adjusted with shims in steps of 0.05 mm. Finally, the Shimblock is locked in order to achieve a permanent and stable position.

Adjusting elements enable contact points to be accurately aligned to a workpiece independent of the system grid.

Individual contact points or entire assemblies can be positioned exactly to the desired coordinates.

Rotating, swivelling, tilting, linear displacement: There are special adjustment elements for every task, which can be combined with one another as ALUFIX system components..

Application example with rotary plate

The rotary plate enables defined rotation of the elements attached to it - accurate and reproducible thanks to locking screws and scales with verniers.

The adjustment takes place, depending on the selected model, in steps or infinitely.

In the picture above, the workpiece is mounted with a 6-jaw keyless chuck.

ALUFIX rotary swing unit

Measuring fixture for hose.
The positions and angles required are easily calculated with the help of Alufix Expert software (page 140).
Fixtures like this are implemented very quickly.

Application example:
With the rotary swing unit, the tip of a center can be adjusted to any defined point of an imaginary hemisphere.

Using a cross roller slide under the unit the center point of this hemisphere can be finely adjusted in x and y.

The quick-change coupling mounted between bar and cross slide enables easy removal or exchange.

280769	50	right	100x100	1.485

The angle of the center point is guaranteed by a specially machined contour block. The position in x, y and z is defined by the shimblock, the upper part of which is adjusted with shims in steps of 0.05 mm. Finally, the Shimblock is locked in order to achieve a permanent and stable position.

ALUFIX shim foil

Peelable shim foil in various thicknesses
These shim foils are used in conjunction with fixed shims to adjust shim blocks.

Shims comprise of 0,05mm thick laminated alu-foils. The easy process of peeling with a knife reduces the foil to the required thickness.

The advantages:

- Tolerances are evened out, making remachining jobs such as milling, grinding etc. unnecessary
- Reduces setting up times
- Reduces amount of machining required

Type 1: x,y

Type 2: z

TopPos Modular System

Repeatable and freely positionable

Novel positioning system for work-piece contact points.

Accurate and repeatable without dedicated, machined contours.

100% catalogue items for fast fixture building and adaptation.

- New design with TopPos elements:
- Replaces up to 90% of individual contour blocks with a few standard elements
- Positioning in grid of 1mm or 0,5° respectively = max. 0,5mm/0,25° deviation (optional 0,5mm grid possible)
- Precise alignment with 0,05mm shims, +/- 2mm range
- Linear components have 10mm, rotary components have 10° steps
- Actual grid achieved by a combination using differential steps (plus or minus 1)
- Profile size 80x80 (50x50 on request)
- Repeatable, reuseable

TopPos grid setting

Movement of top set strip (in red) from one position to the next (arrow) corresponds up to 9x1 mm step

Set up directly on Alufix

The connectors in the picture are shown on pages on pages 65 - 66

Adapter cross plate ALUFIX

use with ALUFIX 40 bar and TopPos profile

Nr.	A	B	C	D	E	F	G	H	I	T	
135003-1	40	122,5	22	10	2	85	60	28	10	40	398

ALUFIX Classic

V pieces and delta blocks

These elements are used primarily for mounting cylindrical parts

Application example for V 90°

Application example for delta block 120°

Application example for rotated delta blocks 90°

Knife Vs for small parts, Vs with various angles and in different versions for large part diameters

2 delta blocks mounted next to each other also create a V, and by spacing them can be used more flexibly and also for large diameters.

By rotating them 90° it is also possible to mount conical or wedge shaped parts.

Application example for V with winder tape

The tape is used with Vs or delta blocks together with winders and deflectors (page 100)

V piece 90° single

ALUFIX Classic

Screw jacks and top sections

Connection variety between part, frame and base plate

ALUFIX top sections provide the contact point between a part and an ALUFIX frame or base plate.

Using footplates, screw jacks, extensions and joints offset, variable and reliable positioning of numerous top section elements is achievable.

Material and surface characteristics for top sections

Fixed and spring loaded centres, true line studs, rotating top sections:
High tensile aluminium
Hard slide coated

Centres with ball:
• Base in high tensile aluminium,
• balls hardened and polished

Remaining top sections:
• High tensile aluminium, anodized

Screw-jack

with precision thread and check nut

Plasticine compound resin
Knead blue and yellow components in ratio 1:1, blend well until colour throughout is green.

Apply within 15 minutes. The resin hardens to full strength within 3 hours.

Technical details:
Tensile strength 300 kg/cm²
Compression strength: 800 kg/cm²
Heat resistance upto +200°C

Application example for compound resin in standard moulding cap.

Compound resin for moulding workpieces

Nr.	Contents g	g
80692	100	120
80685	400	460

Attaching the forming jaws with plasticine compound

Positioning of workpiece

The forming jaws with the compound resin are pressed together.

The compound resin adjusts to the contours of the workpiece

Universal Vise

2 pcs., without basic unit for mounting on base plates
or grid base plates, Shift $\pm 12,5$ mm

Other colors on request.

ALUFIX Classic Connection elements

A variety of elements allows combination of Alufix components whenever two opposite holes, or a hole and a nub are to be connected.

This works also between different system sizes using reducer sleeves.

Quick connection

For fast, constantly changing fixtures we recommend using quick connection elements.

A twin bolt is positioned between Alufix elements to be connected. An excentric slot on the lock slides round and grips the head of a twin bolt resulting in a tight connection.

Recommended torque must be adhered to otherwise head of twin bolt may be damaged.

Screw connection

For lasting tight connections the screw connection has proved to be the best.

Connecting different system sizes

Alufix elements in different system sizes are connected using

- Reducer sleeves
- Reducer bolts

Connecting with couplings

Single coupling with screw connection is used in face ends of Light bars for accurate positioning of further elements.

Picture shows assembly using screw connectors

Double coupling with screw connection is used for centering two Light bars end to end.

Picture shows assembly using screw connectors, quick connectors are also possible.

Connecting with couplings

Single coupling with quick connection is used in face ends of Light bars for accurate positioning of further elements.

Picture shows assembly using quick connectors

Single coupling with screw/quick connection (combi bolt) is used for centering two Light bars end to end.

Picture shows assembly using screw and quick connectors.

#82263 Tools

ALUFIX 50 (10-pcs.), comprising of:

Nr.	Pcs.	Name
82551	1	Positioning rod
80439	1	Handle 112,5
80435	1	Extension 200
80437	1	Extension 300
10484	1	Hex insert bit WAF6
10485	1	Hex insert bit WAF8
10486	1	Hex insert bit WAF10
27931	1	Pin spanner 17/23
81118	2	Key for knurled profiles 32/42

The components in tool sets are also available as single items.

ALUFIX

Basic Kits

Starter-Kits, optimal selection of basic modular elements and accessories

STARTER KIT A

#83131 Screw clamp
with ball joint, foot plate and extension, 371g

- max clamping width 25 mm
- extension 100 mm

STARTER KIT B

#83132 Screw clamp
with ball joint, swivel arm and screw clamp, 936g

- max clamping width 50 mm
- arm length 280 mm (2x140)
- hydraulic central clamping
- workpiece can be fixed in any position

STARTER KIT C

#81020 Clamping element set
M6, 69 Pcs., 650g

Comprising:

- 20 clamps in different shapes and lengths from 45 to 85mm
- 24 threaded rods M6 in 6 lengths from 25 to 150mm
- 4 coupling nuts, 10 knurled nuts and 10 washers

ALUFIX-Vorzugsreihe
Grüne Kennzeichnung: Artikel ist sofort lieferbar.
C: Ausführung Classic, E: Ausführung Eco, C-E: Classic oder Eco
■: Farbe "Natur", ■: Farbe "Schwarz"

STARTER KIT D

#83134 Hold down spring
and hold down stud with M6 thread, 40g

Comprising:

- Hold down spring L=60mm
- Hold down stud L=60mm (other length on request)
- One reducer sleeve each with thread M8, M10 und M12

STARTER KIT E

#83135 Vise
with pins, jaw width 50 mm, 810g

- high tensile aluminium
- exchangeable jaws
- clamping width 65 mm

STARTER KIT F

#82080 Keyless chuck
with reversible jaws, D80, 368g

- high tensile aluminium
- centric clamping
- diameter 80mm

ALUFIX elements can be anodized in different colors.
The color "natural" is standard, "black" is available as an alternative -
then simply add "-1" to the article number when ordering.
Other colors on request.

ALUFIX elements can be anodized in different colors.
The color "natural" is standard, "black" is available as an alternative - then simply add "-1" to the article number when ordering.
Other colors on request.

Workstation, metal, lockable
with drawers, suitable for Basic Sets 6 and 7

Nr.	Width	Height	Depth	Kg.
282562	570	780	960	85

Storage of Alufix components in 6 clearly laid out, spacious and fully extendable drawers, also suitable for Alufix 40 Bars 80x80. Two top drawers are equipped with inlays for small components. Lower drawers equipped with non-slip mats.

Load capacity per drawer 75 kg.

Workstation, metal, lockable
with drawers and storage compartment, suitable for Basic Set 9 and extension sets

Nr.	Width	Height	Depth	Kg.
282727	570	780	1030	88

Storage of Alufix components in 6 clearly laid out, spacious and fully extendable drawers, also suitable for Alufix 40 Bars 80x80. Additional storage compartment mounted at rear for safe storage of long bars and profiles 50x50. Two top drawers are equipped with inlays for small components. Lower drawers equipped with non-slip mats.

Load capacity per drawer 75 kg

Storage compartment for workstations
for storage of long bars 50x50

Nr.	Width	Height	Depth	Kg.
51753	480	660	68	-

Storage of long bars in 6 pockets. Assembly on rear of workstation with M8 screws included in supply.

As accessory for mobile measuring units:
Adapter plate for mobile measuring arms

Nr. 91487
Incl. connection elements to mount on mobile measuring units. Further adapter plates available on request

Mobile measuring and storage unit With gridded precision plate and drawers

Suitable as assembly platform and fixture base,
with grid base plate 800x1200mm, grid 100mm,
grid holes D12,5/M6.

Nr.	Wigth	Height	Depth	Load capacity	Kg.

- 4 drawers 50 mm
- 2 drawers 75 mm
- 1 drawer 100 mm
- 1 drawer 150 mm
- 4 swivel castors, 2 with brake
- Grid plate anodized black on request
- Grid plate with optional with other grid / sleeves

Mobile measuring and storage unit With gridded precision plate and drawers

Height adjustable, also suitable as assembly
platform and fixture base, with grid base plate
800x1200mm, grid 100mm, grid holes D12,5/M6.

Nr.	Width	Height	Lift	Deptj	Load cap.	Kg.
284452	1200	930	180	800	170 Kg	140

- 4 drawers 50 mm
- 2 drawers 75 mm
- 1 drawer 100 mm
- 1 drawer 150 mm
- 4 swivel castors, 2 with brake
- Grid plate anodized black on request
- Grid plate with optional with other grid / sleeves

Mobile measuring and storage unit XL With gridded precision plate and drawers

Suitable as assembly platform and fixture base,
with grid base plate 1600x1200mm, grid 100mm,
grid holes D12,5/M6.

Nr.	Width	Height	Depth	Laod cap.	Kg.
285101	1200	930	1600	300 Kg	250

- 8 drawers 50 mm
- 4 drawers 75 mm
- 2 drawer 100 mm
- 2 drawer 150 mm
- 6 swivel castors, 2 with brake
- Grid plate anodized black on request
- Grid plate with optional with other grid / sleeves

Vacuum base

Item number: 282446B-1

This universally applicable vacuum plate forms the basis for mounting measuring arms. A battery-operated miniature pump creates a vacuum in seconds so that the plate is "sucked down".

Monitoring displays, control lights and pressure switches ensure a firm and secure stand. Adaptations on the top enable the quick and secure attachment of measuring arms of known brands.

The Witte Vacuum Base does not require any additional units. A vacuum pump, signaling devices, function and monitoring devices are integrated in the compact design.

This enables use in locations far away from any energy supply. A special double lipped seal also allows use on curved surfaces and expands the range of applications possible uses in many ways.

Pre-machined connection options for measuring arm adapters from various manufacturers enable the mounting of special adapter rings.

Dimensions: 260 x 80 mm

Weight: 3,7 Kgs

Clamping force:
maximal 4200 Newton at sea level

Battery Charger*: 100 to 240 volt

Battery pack* power: 12 volt
Light diodes indicate energy supply.

Should the battery level drop below the safe operating level then a signal will warn the operator.

End vacuum is adjusted to 200 mbar which equals 80%.

(*): Parts are included in delivery .

FIXMES

Alufix and TopPos parts library for CAD systems

Fixmes is an Alufix parts library on a geometric basis for designing and documenting fixtures. Using Alufix standard elements fixtures can be built in a fraction of the time required previously. By designing the fixture on-screen expensive idle-times of the measuring machine are avoided.

The principle:

at the CAD workplace the user designs a desired fixture for workpiece machining or measuring using Alufix components. To do so he can use all parts available in the Fixmes library.. The selection is made according to one of the following features:

- Item No.
- Name
- Dimension

The parts of the fixture can be displayed as a wire model or solid. For a clearer image and an increase in speed individual planes or elements (holes) can be excluded. A printout of the finished fixture includes a parts list.

The advantages:

- Shorter design times
- Better prolonged use of measuring machine
- Timely preparation of fixture
- Documentation for later repeat assembly of fixture
- Short term changes can be carried out quickly
- No training necessary,
- CATIA or AutoCAD functions are utilised
- Also for off-line programming

83677 Fixmes Library für Catia V5

Elements of Alufix modular fixturing system are stored as *.catpart and *.catproduct files.

In addition a CATIA catalogue with parameterized parts is available on request. Elements can be selected according to different criteria such as item number, description or dimensions.

92562 Fixmes Library für Unigraphics NX5

Alufix elements stored with attachment *.prt

83676 Fixmes Library for AutoCAD

Alufix elements stored with attachment *.dwg

82157 Fixmes Library IGES Format

Alufix elements stored with attachment *.igs

82662 Fixmes Library STEP Format

Alufix elements stored with attachment *.stp.

In addition we also offer a download service from internet under: www.partserver.de

After registration Alufix components can be downloaded free of charge in all native or universal formats under this address.

Surface cut for contour blocks

Individual contour block design

ALUFIX Experte

3D Design Software #85344

Alufix Expert software makes automatic designs for fixtures with corresponding partlists.

You choose the Alufix /TopPos system and define clamping points. The software calculates on the basis of this information complete solutions and variations of a fixture. Simply select the desired Alufix system, the basic type of build (frame or plate), the grid size and the position and function of clamping points.

On the basis of this input the software calculates complete solutions and variations. For checking purposes and measuring off of surface vectors additional part data in all established formats can be imported.

Pictures show some variations, which have been calculated by the software. The clearly structured, self-explaining software is easy to learn. Two separate but complementing help functions (Tool tips and Operation Manual) support users at all times. The design data is exported in either IGES, STL or VRML format (i.e. for offline programming of coordinate measuring machines), or can be transferred with a macro and the corresponding parts library in Catia V4/V5, Unigraphics or Auto-cad.

Structure plates from the Witte FixBase® range are ideally suited as a base for column type fixture design.

These extremely robust plates in sandwich style have been consistently further developed for years and are available with different grids, horizontal, vertical, mobile, rotatable and height-adjustable - right up to autonomous models with safety features.

Further information can be found in the Witte FixBase® brochure.

Column variations

for use on grid base plates or structure plates

Combining a grid plate (conventional or structure type) with exchangeable columns offers following advantages:

Use of one base for user-defined assembly of various workpieces, different assembly degrees of parts (single parts, welded groups, assemblies) different derivatives, match metal function.

Considerably less storage space is required in comparison with complete fixtures.

Comprehensive accessories such as multi level trolleys, foldable, stationary or mobile storage stations and tables are available for storing column supports.

Advantages:

Multiple use of column supports is possible on different base plates or in different departments. Pre measuring of supports on small measuring equipment is possible.

Different types of connection: Fitted screws, PPS (centering bolt and bayonet lever), PWS (clutch bolt with centering pin).

Optional footplates for Classic or Eco bars or simple footplates for Megalu columns are available.

The columns can be used for further functions or contact points by using folding or quick change couplings.

Extra long bars on columns are supported by angled struts or connected to each other using cross bars.

Columns mounted using fitted screw connection

Columns mounted using clutch bolt (PWS)

Columns mounted using bayonet clamps (PPS)

Column connection

with fitting screws for basic grid holes

Simple and proven version.

Two types of locators are available:

- Snug fit, floating (xy positioning)
- Without fit (only clamping)

ALUFIX Hook clamps

Hook clamps are used when workpieces are positioned using holes and simultaneously clamped.

Further they are suitable for clamping points, which are so far away from workpiece edges that they are unreachable using toggle clamps.

Operation is by hand, hydraulic or pneumatic.

How to order:

Hook clamps are individually manufactured for every hole or press cut and comprise of four parts:

- ① Basic unit
- ② Top pin
- ③ Support ring
- ④ Hook (optional two hooks)

When ordering a hook clamp please attach a drawing or data of the support with details on centre pin diameter and the shape of the hole (round or slot).

Further we need details of clearance behind the hole, metal thickness, collar height and direction in which part has been stamped.

When ordering basic unit please also state required hook size

See also our inquiry form under

A	B	C	D	E	F	G	H	I	J	G
18	50	36,5	110	145,5	9	112	20	M8	80	991

1 Hook Clamp Basic Unit compact flexible

Nr.	Base height	G
281886	110mm (low-standard)	700
281887	160mm (high)	1047

2 Top pin compact flexible

Nr.	pin dia	G
306051	$\varnothing 18-0,02\text{mm}$	159
306052	$\varnothing 20-0,02\text{mm}$	169
309929	$\varnothing 25-0,02\text{mm}$	199
306053	$\varnothing 30-0,02\text{mm}$	245
304272	$\varnothing 40-0,02\text{mm}$	410

3 Ring compact / compact mini

Nr.	surface dia	G
311718	$\varnothing 30\text{mm}$	88
311720	$\varnothing 35\text{mm}$	98
306056	$\varnothing 40\text{mm}$	104
311722	$\varnothing 45\text{mm}$	101
306057	$\varnothing 50\text{mm}$	116
311739	$\varnothing 55\text{mm}$	100
304273	$\varnothing 60\text{mm}$	145

4 Hook compact flexibel

Nr.	clamping width	G
311717	30mm	26
306058	35mm	36
306059	40mm	38
306060	45mm	40
306061	50mm	46
311738	55mm	48
304274	60mm	50

Picture shows high base unit version #281887. Special lengths on request.

Tolerances in workpiece thickness of up to $\pm 0,3\text{mm}$ are evened out. Fast adjustment according to workpiece thickness possible.

More space between operating lever and clamping surface = more freedom of movement and less part collision due to horizontal lever movement.

Hook alignment independent of lever orientation, infinite rotary movement 360° .

Support ring infinite rotary movement 360°

Foot for hook clamps

ALUFIX elements can be anodized in different colors.
The color “natural” is standard, “black” is available as an alternative -
then simply add “-1” to the article number when ordering.
Other colors on request.

 **C·E** ALUFIX preferred range
Green: Item is available immediately.
C: Classic version, E: Eco version, CE: Classic or Eco
■: color “natural”, ■: color “black”

Information:

- Weights mentioned in the catalogue are non-committal and approximate, and can deviate considerably i.e. through technical changes.
- We reserve the right to make technical changes.
- Where differences between photos and parts lists exist, the parts lists are decisive.
- Due to fluctuations of copper content in aluminum - alloy colour deviations may occur during anodizing.
- All Alufix components are also available anodized black e.g. for use with optical measuring systems. Exceptions are standard hard anodized items such as pins, connection elements in steel etc. These items maintain their usual characteristics but can be changed on request.
- All details on our products in this catalogue, especially illustrations, drawings, dimensions and statements on performance are to be regarded as approximate average values.
- We reserve the right to change design, technical data, dimensions and weights.
- The indicated standards, similar technical regulations as well as technical details, descriptions and illustrations are valid at time of printing.
- Our general trading conditions are valid.
- Our quotations are decisive.
